This bulletin has been revised to include additional information. New/revised sections of this bulletin are indicated by a black bar in the margin area.

This bulletin is issued to provide information about the replacement of the flexible coupling in the MDPS motor of some vehicles which might experience a “knock” noise originating from the MDPS, when moving the steering wheel to right or left when the vehicle is stopped. This is caused by premature wear of the flexible coupling in the MDPS motor. If any “knock” noise from the MDPS occurs, replace the affected flexible coupling only with an improved one, following the Replacement Procedure below.

Please note that Replacement Procedures 1, 2 and 3, as shown below, vary depending on the model. Calibration Procedures only apply to Replacement Procedures 1 and 3. For reference, there are 2 types of torque sensors to detect revolution and torque in the MDPS system. One is the optical type which detects when light is transmitted and the other is the magnetic type which detects changes in polarity.

Replacement Procedure 1: This procedure applies to Forte (TD) models.

1. Remove the MDPS unit by referring to the applicable procedure on KGIS.

   ★ NOTICE

   Before removing the MDPS unit, make sure to align the steering wheel to the center position.

2. Locate the steering column guide bracket (A) and remove four (4) Torx® head screws (B/C) securing it to the steering column.

   Tightening torque:
   B: 3.6 lb-ft (4.9 Nm)
   C: 2.2 lb-ft (2.9 Nm)

3. Lift the steering column guide bracket (D) and remove the plastic spacer (E). Retain all parts as they will be reused.
4. Remove the steering column guide bracket hinge bolt (F)

   **Tightening torque:**
   13~14.5lb-ft (17.7~19.6 Nm)

5. Remove the steering column guide bracket (G) from the steering column.

6. Hold the MDPS upright and loosen four Torx® head screws (H) securing the column to the motor housing.

   **Tightening torque:**
   6.5~9.4lb-ft (8.8~12.7 Nm)
7. Separate the upper half (I) of the motor housing from the lower half (J).

8. Remove the washer-gasket (K) and connector (L) from lower portion of the MDPS.

   **CAUTION**
   To avoid damage, use caution when removing the connector.

9. Remove the 3 Torx® head screws (M) securing the MDPS ECU cover.

   **Tightening torque:**
   3.6~5.1lb-ft (4.9~6.9Nm)
10. Remove the 4 Torx® head screws (N) securing the MDPS motor cover.

   **Tightening torque:**  
   3.6~5.1lb-ft (4.9~6.9Nm)

11. Remove the MDPS motor cover.

   **CAUTION**
   To avoid damage, use caution when removing the connector and the wiring harness.

12. Remove the original flexible coupling (O) from the housing. In addition, use an air gun to remove any foreign matter from the motor and/or the housing.
13. Install the new improved flexible coupling onto the steering column.

**NOTICE**

Before installing the new part, make sure it has “HNBR” embossed on the surface.

The position of the flexible coupling is not specific and can be installed facing upward or downward.

**NOTICE**

Before re-installing the MDPS unit, make sure the front wheels are pointing straight ahead.
Replacement Procedure 2: This procedure applies to Soul (AM), and Forte (YD) models.

NOTE: Images shown are for general information and not representative of each model's actual configuration.

1. Remove the crash pad lower panel (A) by referring to “Body (Interior and Exterior) → Interior → Crash Pad → Repair procedures” on KGIS.

2. Loosen three (3) steering column shroud retaining screws (B) and then remove the steering column upper and lower shrouds.

   ✤ NOTICE

   When loosening the steering wheel column shroud fixing screws, turn the steering wheel 90° to the left/right from aligned position.

3. Disconnect the MDPS electrical connectors (C).
4. Disconnect the multifunction switch, wiper and washer switch, airbag, and heated steering wheel electrical connectors.

5. Loosen both steering column retaining bolts (D) and rear bolt (E) and lower the steering column assembly.

Tightening torque:
9.4~13.0 lb-ft (12.7~17.7 Nm)
6. Loosen the three MDPS motor retaining bolts (F) and lift the MDPS motor and set it to the side.

   **Tightening torque:**
   5.8~8.7 lb-ft (7.8~11.8 N-m)

7. Remove the original flexible coupling (G) from the motor. In addition, use an air gun to remove any foreign matter from the motor and/or the housing.
8. Install the new improved flexible coupling onto the steering column.

**NOTICE**

Before installing the new part, make sure it has “HNBR” embossed on the surface.

The position of the flexible coupling is not specific and can be installed facing upward or downward.

9. Reinstall all removed components by reversing the order of removal.
Replacement Procedure 3: This procedure applies to Cadenza (VG) models.

NOTE: Images shown are for general information and not representative of each model’s actual configuration.

* NOTICE

Before removing the MDPS unit, make sure to align the steering wheel to the center position.

1. Remove the MPDS unit by referring to the applicable procedure on KGIS.

2. Remove 3 bolts (A) securing the MPDS motor to the housing.

3. Separate the MDPS motor (B) from the housing (C), as shown.
4. Remove the original flexible coupling (D) from the motor. In addition, use an air gun to remove any foreign matter from the motor and/or the housing.

5. Install the new improved flexible coupling onto the steering column.

**NOTICE**

Before installing the new part, make sure it has “HNBR” embossed on the surface.

The position of the flexible coupling is not specific and can be installed facing upward or downward.
6. Reinstall all removed components by reversing the order of removal. Perform **Calibration Procedure**.

**Calibration Procedure used after procedure 1 and 3 ONLY:**

1. Connect the power supply cable to the GDS.

2. Connect the USB cable between the VCI and the GDS.

3. Connect the Main 16-pin DLC cable (GHDM – 241000) to the VCI.

4. Connect the Main 16-pin DLC cable (GHDM – 241000) to the OBD-II connector, located under the driver’s side of the instrument panel.

5. Select **EPS** and click on **OK**.

**NOTICE**

Before re-installing the MDPS unit, make sure the steering wheel is aligned to the center position, with the front wheels pointing straight ahead.
6. Select **Option Treatment** under the Vehicle S/W Management tab.

7. Select **ASP Calibration**.

8. Click **OK** to continue with ASP calibration.
9. Start the engine and center the steering wheel. Then, click **OK**.

10. Turn the ignition **OFF** and wait 15 seconds. Then, turn the ignition **ON** and click **OK**.

11. Access **Current Data** and verify the Steering Angle Sensor value is at 0.0 ± 5.0 degrees.

The repair procedure to replace the flexible coupling of the MDPS Soul (AM) and Forte (YD) has been modified from the original repair procedure outlined in KGIS and previously in TSB CHA 044 (removal of certain parts as currently shown in the service procedure on KGIS is not necessary to complete the replacement of the flexible coupling). As a result, the labor time for the repairs for these models (includes inspection) have been adjusted.
